

SYNOPSIS**PERFORMANCE (TOTAL RETURN)**

	Portfolio	Benchmark
Annualised (since 02/01/2014)	7.4%	9.2%
Last 12 months	12.0%	9.6%
Last 3 months	5.1%	2.2%

PORTFOLIO VALUE

R 1 139.3 million (30/09/2023: R 1 088.2 million)

TRANSACTIONS

Net sales of JSE equities, property and SA bonds
Net withdrawals

INVESTMENT OUTLOOK AND PORTFOLIO CONSTRUCTION

World: US economy likely to soften

Inflation decreasing, but outlook uncertain

Interest rates likely to have peaked

Earnings growth decelerating

Geopolitical tensions are high

South Africa: Poor economic growth prospects

Energy crisis a persistent headwind

Inflation moderating but with upside risks

Interest rates remain near peak

Rand remains vulnerable ahead of Budget Speech

Portfolio construction: High equity weight

Preference for global over local equity

Prefer companies with pricing power and strong balance sheets

Low exposure to expensive US equities

Prefer inflation-linked TIPS over nominal US Treasuries

Preference for quality overseas companies listed locally

Limited exposure to financials given economic risk

Low exposure to resources maintained

SA bond allocation at moderate levels

Physical gold position hedges systemic risks

3 months	1.7	0.5	2.3	0.3	0.2	5.0

* Bonds and cash combined

Returns in percent, calculated on a gross basis

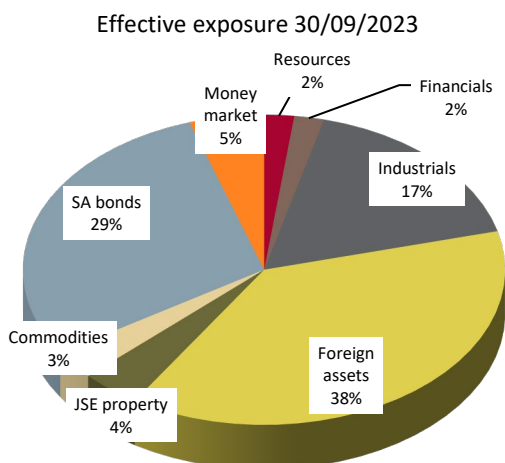

Quarterly performance comment:

- South African equity investments contributed as the local bourse tracked global bourses higher, achieving almost all its annual gain in the fourth quarter — led higher by financials, while resources lagged and industrials were led lower by a sharp fall in index heavyweights Naspers/Prosus
- SA bonds contributed given the rally in the local bond market which recouped two prior quarters of losses — yields fell across the curve, with those on longer dated bonds falling most
- The physical gold investment contributed given a rally in the dollar price for bullion — interest rate sensitive precious metals including gold and platinum rallied and industrial commodities including copper advanced on prospects of a soft economic landing
- Global equities contributed to returns as developed market equities surged and the S&P500 neared all-time highs after the US Federal Reserve signaled it would cut rates in 2024 — but Chinese stocks fell again on sentiment and restrictive gaming proposals
- Cash was also a contributor to absolute returns — yields remain attractive given tight monetary policy to constrain inflation
- Although the allocation to listed property remains low, investments in the sector contributed positively to fund returns — with holdings in Shaftesbury Capital, NEPI Rockcastle and Equites adding value

3. PORTFOLIO CONSTRUCTION

- The weighting in foreign assets decreased slightly to 37% of total — measured together with non-rand earnings of JSE-listed companies, total foreign economic exposure is significantly higher on a look-through basis
- Exposure to foreign equities rose given the market rally and because the managers of the underlying Foord International Fund tactically lapsed the short S&P500 hedge ahead of the December US equity market surge — with the fund's effective foreign cash position lower as a result
- Foreign equity investments prioritise companies with strong pricing power, offering better capital protection against rising inflation — allocation to US equities remains low, given potential earnings risks arising from an economic slowdown
- The allocation to foreign government bonds remains low and comprises short-duration US Treasuries with a preference for inflation-linked instruments — while listed property is stock-specific with an otherwise low weight, given unattractive valuations
- Exposure to SA equities rose slightly, given the JSE's rally in tandem with global markets — despite attractive valuations, ratings for SA Inc. stocks are likely to remain under pressure, given low prospects for economic growth coupled with higher cost of capital
- A moderate allocation to SA nominal bonds was maintained, given attractive yields on SA government bonds — we continue to avoid SA credit assets where risk is mispriced
- Our effective asset allocation is:

Policy parameters		Portfolio at

General comments:

- There are few abstentions. We apply our minds to every single resolution put to shareholders. When there is an abstention it would typically be intentional or for strategic reasons
- We typically vote against any resolution that could dilute the interests of existing shareholders. Examples include placing shares under the blanket control of directors, providing loans and financial assistance to associate companies or subsidiaries and blanket authority to issue shares. On the rare occasion, we have voted in favour of such resolutions, we were able to gain the required conviction in the specifics of the strategic rationale for such activities and could gain comfort that such activities are indeed to be used to the reasons stated
- The firm also has a strong philosophy regarding management remuneration models. We believe in rewarding good managers with appropriate cash remuneration on achievement of relevant performance metrics that enhance long-term shareholder value. We are generally not in favour of share option schemes given the inherent asymmetry between risk and reward typical of such schemes. In addition, we do not believe that existing shareholders should be diluted by the issuing of new shares to management as is the case with most option schemes. We are in favour of the alignment created between management and shareholders when management has acquired its stake in the company through open market share trading and paid for out of management's own cash earnings

IMPORTANT INFORMATION FOR INVESTORS:

Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to the future. Performance is calculated for the portfolio. Individual investor performance may differ as a result of the actual investment date, the date of reinvestment and withholding taxes. Performance may be affected by changes in the market or economic conditions and legal, regulatory and tax requirements. Neither Foord nor Foord Unit Trusts provide any guarantee either with respect to the capital or the performance return of the portfolio. Unit trusts are traded at ruling prices and can engage in borrowing. Foord Unit Trusts does not engage in scrip lending. Commission and incentives may be paid and if so, this cost is not borne by the investor. A schedule of fees and charges and maximum commissions is available on request. Distributions may be subject to mandatory withholding taxes. A feeder fund portfolio is a portfolio that, apart from assets in liquid form, consists solely of units in a single portfolio of a single investment scheme. A fund of funds invests only in other Collective Investment Schemes, which may levy their own charges, which could result in a higher fee structure for these portfolios. Foord Unit Trusts is authorised to close the portfolio to new investors in order to manage the portfolio more efficiently in accordance with its mandate.

FOREIGN INVESTMENT RISK:

The portfolio may include underlying foreign investments. Fluctuations or movements in exchange rates may cause the value of underlying foreign investments to go up or down. The underlying foreign investments may be adversely affected by political instability as well as exchange controls, changes in taxation, foreign investment policies, restrictions on repatriation of investments and other restrictions and controls that may be imposed by the relevant authorities in the relevant countries.
